

Endpoint Security

Endpoint Security solutions protect your organization from known and unknown threats and enforce security policies on laptops, desktops, servers, and mobile devices that access corporate assets. Advanced endpoint protection technologies such as antivirus, anti-spyware, firewall, intrusion prevention, and device control, combined with network-independent access control, provide unprecedented security for systems and networks.

Host / System

Protect laptops, desktops, and servers from attack and malicious code, while simultaneously ensuring their continual compliance with IT policies.

- AntiVirus Corporate Edition
- AntiVirus Enterprise Edition
- AntiVirus for Macintosh
- Client Security
- Critical System Protection
- Network Access Control
- On-Demand Protection for Outlook Web Access
- On-Demand Protection for Web Applications
- Personal Firewall for Macintosh
- Sygate Enterprise Protection

Mobile

Protect Windows Mobile and Symbian systems from emerging threats that target mobile endpoints, and ensure the privacy of the sensitive data they contain.

- Mobile AntiVirus for Windows Mobile
- Mobile Security for Symbian
- Mobile Security Suite for Windows Mobile
- Mobile VPN for Windows Mobile
