

FileMaker Pro is the #1-selling easy-to-use database software that helps individuals and workgroups work faster and securely share information with Windows and Mac users — through a network, over the Web, and in popular formats.

The reason that FileMaker Pro is #1 is simple: It delivers powerful database features integrated with an award-winning design. The intuitive interface makes it easy for novices and experts to manage and share information about people, projects, assets and more!

It's Easy to Install, Learn and Use

The ease of use that's built-in to every FileMaker product is consistently recognised by customers and awarded by industry experts. You can be up and running with FileMaker Pro in less than 10 minutes - even if you're not a technical expert. And every copy of FileMaker includes the FileMaker [Learning Center](#) which provides a wealth of online training resources so you can make the most of your investment.

Get Instant Access to Information without Programming

FileMaker Pro isn't just for storing information like some other database products. It's about getting access to what you need, when you need it — without requiring computer-programming skills.

Whether that information is stored in a record in your desktop database, in a FileMaker database on a network or the Web, or in another application, its easy searching, sorting and reporting capabilities, deliver the details you and your team need — quickly and professionally.

Get More Done Everyday Through Automation & Customisation

FileMaker products include powerful productivity features that automate repetitive tasks, speed data entry, ensure accuracy of dates, and help reduce input and spelling errors.

FileMaker Pro also includes all the elements you need to build custom interfaces that support your unique business needs in a single integrated environment. You can build solutions on your desktop and easily deploy to your network without modification.

Plus, you can add fields, calculations, buttons, your company logo or other design elements — so your database looks the way you want. And for more advanced customisation, [FileMaker Pro Advanced](#) includes powerful development tools to give you even more control over the look, functionality, and deployment of your solutions.

Share with Mac or PC and in Popular Formats

Unlike other database products that only work on a single operating system, [FileMaker Pro](#) and [FileMaker Server](#) run seamlessly on Windows PCs and Macs and allow simultaneously sharing of databases.

Plus, FileMaker supports popular file formats, such as XML, ODBC, and JDBC for data exchange, and reports can be saved to Adobe PDF and Microsoft Excel, making FileMaker information accessible to virtually anyone you choose.

FileMaker Solutions Grow and Scale with Your Organisation

The smallest companies, as well as the largest organisations use FileMaker products because they grow as your needs do. You can start out with FileMaker Pro on a few Windows PCs or Macs sharing databases simultaneously with up to five people using peer-to-peer sharing and Instant Web Publishing. As your workgroup grows and you'd like to [share with more users](#), FileMaker Server products allow database solutions to be shared securely by hundreds of simultaneous users — without modification or complication. You can even integrate your FileMaker databases with your existing Web site, using [FileMaker Server Advanced](#), to make it even easier for vendors, supplier, and remote workers to securely access your FileMaker information. And for FileMaker users on the go, [FileMaker Mobile](#) provides access to FileMaker information on supported Palm OS and Pocket PC handhelds.
